OBJECTIVE

As a recent Information Technology graduate, I am seeking a Backend Developer Intern/Fresher position. In the short term, I aim to strengthen my backend skills by building RESTful APIs, working with databases, and using Django in real-world projects, while leveraging my Angular knowledge for frontend integration. Beyond backend development, I am also developing fullstack capabilities, exploring AI integration in systems, and improving my system design skills. In the long term, I aspire to become a software engineer capable of designing scalable systems and contributing to high-quality products, while continuously advancing in AI/ML to expand my career opportunities.

EDUCATION

HANOI UNIVERSITY OF CIVIL ENGINEERING

2022 – 2026

Bachelor of Engineering in Information Technology — GPA: 3.39/4.0

Ha Noi City, Vietnam

- **Achievements:** First Prize in Line Following Robot Competition (Jun. 2023)

HONORS & AWARDS

Academic Honors : Recipient of the **Merit-based Scholarship** for 5 consecutive terms (Semesters 2 through 6).

TOEIC (READING AND LISTENING) : 660 – Certified by IIG Vietnam

EXPERIENCE

Gozic Technology Development Joint Stock Company

May. – Nov. 2025

Fullstack Developer (Internship and Probation)

Ha Dong, Ha Noi City, Vietnam (On-site)

- Built a user profile service using Django REST Framework and Redis caching, **reducing database load** and **improving profile retrieval latency**
- Developed a marketplace-style module using Angular (frontend) and Django REST Framework (backend); **optimized SQL queries** and **indexing** to improve data retrieval performance
- Designed and implemented a **real-time chat system** (user-admin and chatbot) using Angular, Firebase, applying **query limiting** and **caching for scalable low-latency communication**
- **Engineered an end-to-end LLM fine-tuning pipeline** using OpenAI APIs within a Django backend, including dataset generation (JSONL), training job orchestration, and lifecycle tracking
- **Architected a scalable AI workflow** using Django, LangGraph, Celery, and Redis Pub/Sub with SSE-based real-time updates, enabling reliable asynchronous processing and concurrent AI request handling

PROJECTS

Hotel Booking Platform with Real-time Reservation and AI Chatbot

Oct. – Dec. 2025

Fullstack Developer (Personal Project)

- Architected a full-stack hotel booking platform using Django and Angular with RESTful API using Django REST Framework, implementing RBAC, JWT authentication, **dynamic pricing**, and **integrated payment gateways** (VNPay, PayPal)
 - Designed a **concurrency-safe room reservation system** using **Redis and Lua scripting** to implement **atomic room holds** across date ranges, **preventing overbooking** under concurrent requests
 - Implemented booking session management with **Redis TTL**, **Pub/Sub**, **Celery**, and **SSE** to **enable real-time countdown synchronization** for active reservations
 - Integrated Redis caching for user profiles and high-frequency queries, **reducing database load** and **improving response latency**
 - Built a **real-time RAG chatbot** using SentenceTransformer embeddings and **ChatGroq** (LLaMA 3), implementing custom retrieval logic with **ChromaDB** and **WebSocket-based** messaging, **optimized via Singleton-based model loading**
 - Containerized backend services using **Docker** for consistent and portable deployment
- Tech Stack:** Python, Django, DRF, Angular, MySQL, Redis, Celery, SSE, WebSocket, Docker, ChromaDB, langgraph, langchain, ChatGroq (LLaMA 3), JWT.

Repo: <https://github.com/qan29112004/Hotel-Booking-Platform-with-Real-time-Reservation-and-AI-Chatbot>

SKILLS

Languages: Python, TypeScript, JavaScript, SQL, HTML

Frameworks & Libraries: Django, Angular, Pandas, Tailwind CSS, DRF.

Databases & Caching: MySQL, Redis, Firebase, MongoDB.

Asynchronous & Real-time Systems: Celery, WebSocket.

Tools & Deployment: Git, Jupyter Notebook, Docker.

Core Concepts: OOP, RESTful API
